

**REQUEST FOR STATEMENTS OF INTEREST
W912HZ-19-SOI-0016**

Project Title: USCRP Research Topic 6: Long-term Implications of Coastal Restoration

Responses to this Request for Statements of Interest will be used to identify potential investigators for studies to be sponsored by the U.S. Army Engineer (USACE) Research and Development Center (ERDC) Coastal and Hydraulics Laboratory (CHL). The intent of this request is to seek researchers interested in developing methods for creating sustainable systems of coastal restoration that will reduce the long-term costs of projects, both in terms of use, and operation and maintenance. Beyond the coastal restoration project (green or gray infrastructure) itself, researchers will also describe and quantify the effect of coastal restoration on reducing coastal impacts to the local community. The intent of this effort is to further compel communities to consider actions to assess the implications of coastal restoration projects on coastal communities. Estimated award amounts for individual proposals of \$50,000 to \$250,000 may be accepted. Multiple awards may be funded. Possibly no awards will be made if the submitted proposals do not meet the objectives outlined in this RSOI.

Background:

The U.S. Coastal Research Program (USCRP) is a partnership of the coastal research community to coordinate Federal activities, strengthen academic programs, and build a strong workforce. Three primary research needs identified by the USCRP's nearshore coastal community are to improve understanding of: 1) long-term implications of coastal restoration due to natural and anthropogenic processes; 2) extreme events, including flooding, erosion, and the subsequent recovery; and 3) the physical, biological and chemical processes impacting human and ecosystem health. The USCRP addresses societal needs along the coast through a coordinated effort backed by researchers from Federal agencies, academia, industry, and non-governmental organizations. Awards will be made with the intent of assisting academic institutions in funding coastal and nearshore processes graduate students to address critical research needs within the coastal community, advancing the state of knowledge, and building the future U.S. workforce.

Public Benefit:

These results will benefit the public through development of guidance and best practices for nearshore and beach sediment management, with consideration of the local and regional setting and engineering actions in the coastal communities. Outcomes will be utilized by federal agencies to understand the most significant processes and human actions that influence long-term coastal restorations with a focus on maintaining and restoring resilient coastal communities. A considerably large portion of US coasts are privately owned, therefore close working relationships with private landowners are essential, not only for their support but to gain from their knowledge about private coastal lands. The support of these entities is essential for providing coast-wide consistency with coastal restoration objectives and outcomes as well as innovate approaches to project implementation.

Brief Description of Anticipated Work:

This research is envisioned as a 2-year study. Proposals will examine the long term implications of engineered (grey and green infrastructure) coastal restoration solutions along open-ocean, bay, and Great Lake shorelines.

Objective 1: In order to achieve the main objective of this study of developing methods for creating sustainable systems of coastal restoration and quantifying the long-term implications of coastal infrastructure on the local community, the researcher should first summarize the state-of-knowledge of processes that influence long-term (years to decades to century) coastal restoration. The objective is to seek to improve coastal restoration and thereby flood protection for families and businesses, and enhance the natural processes that build and ensure that our coast continues to be successful areas for recreational, commerce, and industry. Products from this objective will include: a journal article that documents the state-of-knowledge; and a Community Fact Sheet that succinctly synthesizes these findings (2-4 pages).

Objective 2: Based on knowledge summarized in Objective 1, develop a method to evaluate the uncertainty associated with long-term coastal restoration projects that incorporates variability in short- and long-term alignments of USACE Civil Works Missions to “Increase Coastal Restoration and Resiliency.” Additionally, this objective provides the context needed to evaluate other activities in the coastal zone, including: transportation, navigation, and port projects; oil and gas development; ground water management and land use planning. Document methodology and example applications in a journal article.

Objective 3: An example of a product from this objective is a community guidance document to provide the coastal communities with methods to evaluate their long-term (years to decades to century) coastal restoration plans. This guidance document may recommend use of existing data sets that quantify vulnerability and associated uncertainty based on formulation of a long-term coastal restoration and anthropogenic activities. The guidance could also provide methods for coastal restoration that sustains, to the extent practicable, any cultural heritage by protecting historic properties and traditional living cultures and their ties and relationships to the natural environment. The product from this objective will be a Community Guidebook for Evaluating Response to Long-Term Coastal Restoration and Change.

Annual products from this work will include Community Fact Sheets (2-4 pages each) that summarize advancements each year; and Annual contribution to the USCRP Quarterly Bulletin (1/2- 1 page for each article). Journal articles that are co-authored with a practitioner are anticipated at the end of Objectives 1 and 2, and at the conclusion of the study. If numerical models are utilized in the study, open-source modeling systems are preferred so that all coastal researchers can benefit from advancements.

Base Period Tasks:

Objectives 1-3 and associated products will be addressed in the base period work effort and summarized in the summary report for this period.

Government Participation:

The university researcher(s) will work in close coordination with the USACE technical lead who will provide technical assistance as appropriate in determining parameters, tools and methods for the study. The USACE will review reports and offer technical advice and opinion on the research/investigation findings. The USACE will also facilitate and participate in coordination efforts and meetings either in person or by webinar. The USACE will ultimately incorporate the research and documentation by the researcher(s) into a technical report.

Materials Requested for Statement of Interest/Qualifications:

Please provide the following via e-mail attachment to: Stacy.D.Thurman
(Maximum length: 2 pages, single-spaced 12 pt. font).

1. Name, Organization and Contact Information
2. Brief Statement of Qualifications (including):
 - a. Biographical Sketch,
 - b. Relevant past projects and clients with brief descriptions of these projects,
 - c. Staff, faculty or students available to work on this project and their areas of expertise,
 - d. Any brief description of capabilities to successfully complete the project you may wish to add (e.g. equipment, laboratory facilities, greenhouse facilities, field facilities, etc.

Note: A proposed budget is NOT requested at this time.

Review of Statements Received: Based on a review of the Statements of Interest (SOI) received, an investigator or investigators will be invited to prepare a full study proposal. Statements will be evaluated based on the specific experience and capabilities of the investigator(s) in areas related to the study requirements. Additionally, the evaluation method and selection criteria for research and development awards must be: (1) the technical merits of the proposed research and development; and (2) potential relationship of the proposed research and development to the Department of Defense missions.

Please send responses or direct questions to:
