

Scientists in Parks Fellows

The **Scientists in Parks (SIP) Fellows** program is now accepting applications from current upper-level undergraduate and graduate students for 15 **PAID** summer 2022 opportunities with the National Park Service. Each opportunity with the SIP Program affords a distinct and memorable experience with projects that vary based on location, focus, and complexity. This year's projects include, but are not limited to, tracking coral reefs at War in the Pacific National Historical Park, community-based education and outreach at Everglades National Park, and surveying pollinator abundance at Yosemite National Park.

Application Deadline is January 23rd, 2022 at 11:59 PM Eastern Time

Inside the head of a SIP Fellows Mentor

This webinar will feature some of our favorite people, the mentors! Come have a conversation with them about what it takes to get selected into the program. Ask questions like: What qualifications do supervisors look for in their applicants? Does experience level really matter? and Do you actually like wearing those funny hats!

January 10th, 2022 at 2:00 PM Eastern
