1. INTRODUCTION

1.1. University Background. The University is a fully accredited State of Arizona institution of higher education. Additional information on the University is available at the following link [Quick Facts](#).

1.2. Proposal Background.

The University is requesting sealed Proposals from qualified Proposers for a P3 Energy Advisor.

On Earth Day 2022, NAU President Cruz-Rivera declared a Climate Emergency and committed to heightened investments of the University time, talents, effort and resources to securing the conditions needed to achieve carbon neutrality for Scope 1 and 2 emissions by 2030. This goal of Carbon Neutrality by 2030 was institutionalized with the Arizona Board of Regents approval of the University's Elevating Excellence Strategic Plan in the summer of 2022. By the beginning of 2023, the Roadmap for Carbon Neutrality was approved. The University's Smart Sustainable Master Plan was approved in November 2023 that included district energy modernization and decarbonization.

The University is working towards decarbonization and seeking the expertise of an experienced advisory firm. The selected firm will aid in securing Public Private Partnership (P3) that will enable the University to modernize and decarbonize its district energy system and stand-alone gas infrastructure not connected to the district system. The selected P3 Advisor will lead the work through all phases which will include economic, technical, and contractual expertise across all asset classes and P3 markets. The University is seeking a firm that has a technical and engineering expertise related to energy and utilities, experience in revenue forecasting, insights into federal financial incentives, assistance with drafting specifications and evaluating P3 proposals and other alternative procurement methods, financing, and development activities. This strategic initiative aims not only to advance the University's progress to carbon neutrality but also to position the University as a leader in environmental stewardship.

The Flagstaff campus operates two central heating and cooling plants, one on north campus, and one on south campus. The north plant is a steam plant consisting of five steam boilers and three operable chillers. The south plant consists of three medium temperature hot water boilers and two chillers. Both plants operate year-round. The peak load for the combined plants is approximately 100,000,000 Btu/hour.

Steam and hot water piping is largely distributed through underground tunnels with some direct buried sections at end of line. Chilled water is almost exclusively distributed through direct buried lines. The north plant feeds steam to 52 buildings and chilled water to 33 buildings. The south plant feeds hot water to 13 buildings and chilled water to 6 buildings. The University has 162 facilities (6,912,811 GSF)

we heat and cool, the remaining of which rely on standalone boiler systems and often do not have cooling.

Emissions from the University distributed energy system and stand-alone heating and cooling amount to 42% of the university's total emissions. As part of our Climate Action Planning process between 2021-2022, an analysis of potential options for carbon neutral heating and cooling was conducted by Affiliated Engineers Inc (AEI). After evaluating a wide range of options, the plan identified two potential thermal solutions as Biomass or ground source heat pumps. These thermal strategies call for a conversion of both distribution systems to low-temperature hot water, connecting the north and south plant loops, and connecting standalone buildings to the distributed energy system where feasible.

Between 2020 and 2021, the University worked with the USDA's Wood Energy Technical Assistance Team to evaluate utilization of low value forest restoration biomass (e.g. small diameter trees, limbs etc.) for the district energy system conversion. They recommended a high efficiency, thermally led CHP with off-site wood storage that would utilize approximately 30,000 Bone Dry Tones (BDT)/year with the potential to generate significant power at a very low cost per unit. We have analyzed the lifecycle emissions profile of the use of restoration biomass and are confident in the carbon neutrality of burning biomass due to the alternative uses of biomass and the enhanced resiliency of our regional forests to the threat of catastrophic wildfire. The University and other partners in the region have evaluated the long-term biomass supply (forest residues, sawmill residues and woodland biomass) as over 400,000 bdt/yr of wood fiber within a 75-mile radius primarily from national forest lands that are part of the 4-Forest Restoration Initiative. The Bioeconomy Development Opportunity Zone Initiative recently concluded that 100,000bdt/yr were low-moderate risk and provided risk rating of an A for bioeconomy development.

The University also followed up on the AEI option of geothermal heat pumps. AEI oversaw the drilling of two test wells to better understand the heat flow in the local geology. One was drilled to a depth of 512 feet and another to 848 feet. These tests found limestone and sandstone with no water intrusion. The measured thermal conductivity was high with measures of 3.2-3.5 W/mK, significantly higher than the assumed conductivity of 1.3W/mK in the AEI climate Action Plan analysis and will allow for a smaller borefield to support this potential solution.

Preliminary analysis suggests that biomass or geothermal heat pumps appear to be the best solutions for our region, we do not want to lock potential P3 partners one single solution and are open to other decarbonization solutions, or combinations of technologies for the central plant and standalone buildings. We intend to be selective in the buildings that are connected to the district system by considering load and distance to existing infrastructure, as well as age and compatibility of the existing building infrastructure. Buildings not connected to the district system will need a carbon neutral heating conversion solution for this project.

The University is committed to pursuing this utility modernization and decarbonization strategy through a public-private partnership.

CONTRACT FOR SERVICES

This Contract (“Contract”) is made between the Arizona Board of Regents (“ABOR”), for and on behalf of Northern Arizona University (“University”), and _____ (“Contractor”).

WHEREAS the University issued Request for Proposal # _____ for _____.

WHEREAS the Contractor responded with its proposal.

WHEREAS the University awarded a Contract the Contractor.

NOW, THEREFORE, in consideration of the above premises, the parties hereto agree as follows:

Contract. Contractor agrees to provide _____ (“Services”) to include but not limited _____ in accordance with the terms and conditions herein and Exhibit A, attached hereto and incorporated herein by reference.

1. Term.

a. The Contract shall commence on _____, for an initial one (1) year period with the option to renew for four (4) additional one (1) year periods for a total term not to exceed five (5) years.

b. The University may terminate the Contract, in whole or in part, including pursuing all remedies afforded by law or in equity with or without cause, upon thirty (30) days written notice to Contractor. Subject to the provision of any Transition Services (as defined below), upon termination, Contractor will refund to the University all prepaid amounts for Services not delivered or performed. If the Contract is terminated pursuant to this section, subject to the provision of any Transition Services, the University will pay Contractor, as full compensation under the Contract: (1) the portion of Services delivered or performed and accepted prior to the effective date of termination based on the unit prices in the Contract, or, if no unit prices are provided, the pro rata amount of the total order price based on the amount delivered or performed; and (2) a reasonable amount, not otherwise recoverable from other sources by Contractor, and as approved by the University, with respect to the undelivered, unperformed, or unacceptable portion of the Services. In no event will compensation paid previously under the Contract together with compensation paid under this section exceed the total purchase order or Contract price.

c. The University may terminate the Contract, in whole or in part, if Contractor defaults on any of its obligations in the Contract and fails to cure such default within seven (7) days after receiving notice of default from the University. In the event of such a default, the University may procure the Services from other sources and Contractor will be liable to the University for any excess costs the University incurs.

d. The University shall have the right to terminate this Contract at any time in the event the Contractor files a petition in bankruptcy, or is adjudicated bankrupt; or if a petition in bankruptcy is filed against the Contractor and not discharged within thirty (30) days; or if the Contractor becomes insolvent or makes an assignment for the benefit of its creditors or an arrangement pursuant to any bankruptcy law; or if a receiver is appointed for the Contractor or its business.

e. Upon termination of the Contract or termination of any Services (regardless of the reason for termination), the parties will work in good faith to transition the terminated Services to the University or its designee(s), with minimum interruption to the University's business. At the University's option, Contractor will continue to provide Services and will provide transition support at rates consistent with the terms of the Contract for a period of no longer than one-hundred and eighty (180) days following the termination date (the Transition Period). Contractor will provide the post-termination Services (the Transition Services) at least at the same levels of quality and timeliness of performance as Services were provided prior to termination, in a professional manner, with high quality, and in accordance with industry standards. The parties may, by written agreement, modify the Transition Services to be provided and the length of the Transition Period.

f. In accordance with ARS §35-154 and §41-2546, if the University's performance under the Contract depends on the appropriation of funds by the Arizona Legislature, and if the Legislature fails to appropriate the funds necessary for performance, then the University may provide written notice of this to Contractor and cancel the Contract without further obligation of the University. Appropriation is a legislative act and is beyond the control of the University.

2. Survival. All provisions of the Contract that anticipate performance after the termination of the Contract, and all provisions necessary or appropriate to interpret and enforce such provisions, will survive termination of the Contract.

3. Settlement Method and Terms. Payment will be subject to the provisions of Title 35 of the Arizona Revised Statutes ("ARS"), as amended from time to time, relating to time and manner of submission of claims. The University's obligation will be payable only and solely from funds appropriated for the purpose of the Contract. After delivery and acceptance of the Services, Contractor will submit an acceptable invoice to the University. Invoices must be itemized, reference the appropriate University purchase order number, and include sufficient detail to document the invoiced amount. The University will pay Contractor for the Services delivered and accepted net 30 days after receipt by the University of an invoice meeting the requirements of this section. Invoices will be electronically delivered to the University's Accounts Payable department by email to AccountsPayable@nau.edu.

4. Independent Contractor. Contractor is an independent contractor. Neither the University nor Contractor may bind the other. None of the Contractor Parties will be employees, agents, partners, or joint venturers of the University. 5. **Conduct and Control of Services.** The conduct and control of the Services under this Contract lies solely with Contractor, and the University is interested only in final results to be achieved. The University shall be permitted to retain other contractors performing the same of similar tasks, and the Contractor shall be permitted to provide services to other parties, consistent with the Contractor's obligations to complete the Services undertaken pursuant to the terms of this Contract.
