

Freshmen: Help shape NAU's future!

Learn about healthy, sustainable landscapes and participate in research and on the ground action to help NAU move toward a pesticide-free campus.

Course instructor, Paul Gazda, has been staff advisor for the student-powered Sustainable Landscape Maintenance project for over 3 years. Because of this project, NAU has begun to move away from pesticide use on campus. This class will continue student engagement in this important process to make the campus landscape healthier for all.

Learn and be part of the solution in this First Year Seminar class!

Enroll in FYS 111 – “Healthy Landscape, Healthy You” for Fall 2014
