Executive Summary:

The estimated total economic impact of all Arizona State Parks on the state has also been modeled in this study using IMPLAN. To perform this analysis, visitor spending in the parks was combined from all parks by sector, and these totals were then entered into the IMPLAN model. The results of individual county models cannot be summed to produce a state economic impact number.

It was estimated that Arizona State Parks visitors spent a total of \$209,722,879 in FY14. These total direct expenditures of \$209.7 million resulted in \$130,063,972 in direct impact, \$40,451,170 of estimated indirect impact, and \$56,222,368 of estimated induced impact. When the effects of direct, indirect and induced impacts are combined the total estimated impact of visitors to state parks in Arizona during FY14 is \$226,737,510. This total state impact resulted in 1,621 estimated direct jobs and 745 indirect jobs for a total of 2,367 total jobs.

Finally, visitors' expenditures combined with their direct, indirect and induced impacts resulted in an estimated \$17,550,855 in Federal Government taxes and an estimated \$15,895,473 in state and local government taxes. The total estimated tax impact of Arizona State Park visitors in FY14 was \$33,446,328.
