Yavapai Apache Nation
Demographic Analysis

Introduction

This analysis of the Yavapai Apache Nation was undertaken by the Arizona Rural Policy Institute (ARPI) a unit of the Center for Business Outreach in the W.A. Franke College of Business at Northern Arizona University for the planning department of the Yavapai Apache Nation. The ARPI has produced the Demographic Profile for the Yavapai Apache Nation, with the latest information available from the 2015 American Community Survey (5-year estimates) American Indian and Alaska Native Tables. This document is provided to Arizona tribes as a product of the EDA University Center Grant provided by the EDA to the Center for Business Outreach at Northern Arizona University.

Since 2010 the American Community Survey (ACS) has been tasked with producing population, demographic and housing unit estimates for the United States on an annual and 5 year series basis. This analysis is entirely based the American Community Survey, 5-year estimate data for the period 2011 to 2015 and is annotated in the document as ACS 2015 (5-year estimates). The 2015 ACS 5-year estimates are based on data collected between January 2011 and December 2015. The data were used to analyze household income, poverty rates, employment, language use and household characteristics for Yavapai Apache Nation. Only the 5-year estimates are used as this is the only data that is provided for small population areas, the 5 year data represent the average characteristics over the 5-year period.

Demographic characteristics are outlined by three separate levels, the State of Arizona, Yavapai County and the Yavapai Apache Nation. Comparisons between the State of Arizona, and Yavapai County serves to provide further levels of comparison when examining demographic characteristics of the tribe. Yavapai County was chosen for comparison as a majority of Tonto Apache tribal lands fall in Yavapai County.

Appendix A contains the margin of error estimates to be used to calculate the range of estimates for the American Community Survey data.
Population
The Yavapai Apache Nation population increased dramatically, increasing by almost one-third (30.2%) between the last census in 2010 and 2015, at a faster rate than between the 2000 and 2010 census, when the population actually decreased at a rate of 3.4%. The 2010 SF1 census is considered the official count, and accounts for only the population within the exterior boundaries of the Yavapai Apache Nation. The rate of population growth is less than both the State and the County. This rate, however, reflects growth by birthrate alone and not growth through in-migration as is the case with both the State and the County. Outmigration to border communities also impacts the population count as only on-reservation populations are counted.

Gender

There are more females (53.9%) than males (46.1%) in the Yavapai Apache Nation. The gender ratios in the Yavapai Apache Nation are similar to the State and County ratios where there are slightly more females 51.1% respectively than males 48.9% respectively. See Table 2.

Age

The Yavapai Apache Nation is dominated by tribal members who are 19 years or younger. The under-20 year population accounts for more than one-third (39.5%) of all tribal members, representing a far larger portion of tribal members than the same age group does for the State (27.1%) and Yavapai County (19.9%). The fact that more than one-third of the tribe is younger than 20 years of age carries with it some fairly important policy implications. The large portion of younger tribal members influences the provision of health and educational services as well as poverty and workforce issues as well.

On the other hand, the tribe has fewer members who are 65 years or older. This age group which comprises those who have retired and are out of the workforce account for 12.3 percent of tribal members when compared to 15.4 percent for the state and 27.2 percent for the County. Finally, those age 20 to 64 years account for 48.2 percent of the tribal members, which compares favorably to the State (57.5%) and the County (52.9%). The large number of tribal young persons will have an effect on the development of the tribal workforce in the future. See Table 3, and Figure 2.

Figure 2. Age Cohorts for Arizona, Yavapai County and the Yavapai Apache Nation 2011-2015
A population pyramid, also called an age structure diagram, is a graphical illustration that shows the distribution of various age groups in a population (typically that of a country or region of the world), which forms the shape of a pyramid when the population is growing.

The population pyramid below (Figure 3) illustrates the difference between males and females for the 5 year age cohorts. The pyramid is not-symmetrical indicating that there are age cohort differences between males and females for the under 20 year age group. At the top of the age pyramid there are more males than females. This is a demographic outlier as women tend to live longer than men. The age pyramid provides an illustrated snapshot of the age structure of the tribal members during the period 2011-2015.

Figure 3. Population Pyramid - Yavapai Apache Nation 2011-2015
Population Under 20 Years

Children those under 19 years of age account for one-third (39.4%) of all tribal members. There are 227 males and 193 female children, of those 46.3 percent of all males are under age 19 and 33.6 percent of all females are under age 19. See Table 4.

Median Age

The median age (the point where 50% of the population are above and 50% are below) for the Yavapai Apache Nation tribal members is 26.1 years, with males younger at 23.0 years and females at 30.4 years. The median age of tribal members is lower than the State (36.8 years of age) and the County 51.3 years. This serves once more to emphasize the overall young age of tribal members. See Figure 4.

Race

Not surprisingly, the majority of Yavapai Apache Nation tribal members identify themselves as American Indian or Alaska Native alone (85.2%), while the remaining 14.8 percent are split between white alone, and two or more races. This stands in strong contrast to the State which is 78.4 percent white alone, and the County which is 91.6 percent white alone. See Table 6.

Ethnicity

In terms of ethnicity, almost one-fifth (18.6%) of Tonto Apache tribal members identify themselves as Hispanic or Latino. This is higher than the surrounding County where more than one-tenth (14.1%) identify themselves as Hispanic or Latino and lower than the State where 30.3 percent self-identify as Hispanic or Latino. See Table 7, and Figure 5.

Figure 5. Ethnicity
**Household Size**

In 2011-2015, there were 318 households on the Yavapai Apache Nation, with an average household size of 3.4 persons and an average family size of 3.9 persons. The average household size of 3.4 persons is larger than the State average (2.7 persons) and the County average (2.3 persons). The average family size for tribal members is larger than both the State and the County, where the average is 3.3 and 2.8 persons, respectively. See Figure 6.

**Figure 6. Average Household and Family Size**
Households

The next section of the demographic profile focuses on households and their structure. The Census defines a “household” as a person or group of people who occupy a housing unit. The “householder” is a person in whose name the housing unit is owned, being bought, or rented. A “family household” consists of a householder and one or more people living together in the same household who are related to the householder by birth, marriage, or adoption — it may also include people unrelated to the householder. If the householder is married and living with his/her spouse, then the household is designated a “married-couple household.” The remaining types of family households not maintained by a married couple are designated by the sex of the householder. A “nonfamily household” consists of a person living alone or a householder who shares the home with nonrelatives only; for example, with roommates or an unmarried partner.

Family households (76.1%) predominate in the Yavapai Apache Nation, traditional married couple families are the majority (35.8%), at rates lower than both the State (47.4%) or the County (50.7%). Households headed by a female head of household (single mothers) account for one-third (34.9%) of all households. Almost three-fourths (70.7%) of all households are either married couple families (35.8%) or households headed by single mothers (34.9%). See Table 8 and Figure 7.

[Bar chart showing percentages of different household types in Arizona, Yavapai County, and Yavapai Apache Nation]
In terms of household characteristics 29.9 percent of all households on the Yavapai Apache Nation are headed by a householder, slightly lower than the State (37.2%) or the County (43.5%). Spouse headed households comprise a minority of Yavapai Apache Nation tribal households (10.7%) less than the State (17.6%) or the County (22.0%). Children comprise more than one-third of all households (37.1%), more than the State (30.4%) and the County (22.1%). Households on the Yavapai Apache Nation are about twice as likely to contain other relatives (18.6%) than the State (8.2%) or the County (6.3%). See Table 9 and Figure 8.

Source: ACS 2011-2015
Family households dominate among Yavapai Apache Nation tribal members (76.1%), at a higher rate than the State (65.6 %) or the County (63.4%). Non-family households (7.5%) account for less than one-tenth of Yavapai Apache tribal member households, less than both the State (16.8%) or County (19.7%). Husband and wife families account for more than one-third (35.8%) of households, whereas residents of the State (47.4%) and the County (50.7%) are more likely to live in husband and wife households. Households on the Yavapai Apache Nation are more likely to be headed by a female householder (34.9%) with no husband present than the State (12.7%) or County (9.4%). Households on the Yavapai Apache Nation are more likely (50.3%) to have children under the age of 18 living in the household, than the State (31.8%) or the County (20.7%). See Table 10, and Figure 9.

Children Under 18 Years Age Living with Grandparent

Children under age 18 are three times as likely to live with grandparents on the Yavapai Apache Nation (7.4%) as they are at the State (2.5%) or the County (2.2%). There are a number of differences between the proportions of children by age living with grandparents. More than half of grandchildren (58.5%) cared for by grandparents are 5 years or older, potentially placing a greater burden on the grandparents. See Table 11 and Figure 10.

Figure 10. Percentage of children under 18 living with a grandparent household

Children under 18 years of age living with a Grandparent Householder
Household Income

The median household income for the Yavapai Apache Nation is $31,250, less than both the County ($44,748) and the State ($50,255). Tribal members are more likely to have lower household incomes than either the State or the County. In fact households are less likely to have incomes of less the $25,000 (36.1%) than is the State (24.0%), or the County (26.4%). Tribal members (56.4%) are more likely than either State (44.2%) or the County (49.1%) to have household incomes between $25,000 and $74,999. Correspondingly, tribal households are a four times less likely (7.5%) to have incomes over $75,000 than the State (31.7%) and the County (24.6%). See Table 12, and Figure 11.

Arizona, Yavapai County, Yavapai Apache Nation
Supplemental Income

Households on the Yavapai Apache Nation are twice as likely to receive Food Stamps (37%) than are residents of the State (14%) and the County (12%). They are also less likely (1%) to receive public assistance income than the State (2%) or the County (2%). They also tend to have fewer households with retirement income (14%) than the State at large (20%) and the County (31%). See Table 13 and Figure 12.

Poverty

Poverty rates on the Yavapai Apache Nation (37.2%) are twice that of the State (18.2%) and greater than the County (16.0%) rates. More than two-fifths of children under 18 years of age (40.2%) are considered to be living in poverty, while more than one-third (37.4%) of those between 18 and 64 also live in poverty. More than one-fourth (27.5%) of tribal members over 65 years of age live in poverty, three times higher than the State (8.8%) or the County (6.9%). Correspondingly high numbers of families (32.6%) live in poverty. See Table 15 and Figure 13.

Persons in Poverty

The Census Bureau uses a set of money income thresholds that vary by family size and composition to determine who is poor. If a family’s income is less than a family’s threshold, then that family and every individual in it, is considered poor. Further the ratio of income to poverty can be used to measure the degree or depth of poverty. The ratio of income to poverty compares a person’s income with their poverty threshold, and expresses the comparison as a fraction. For example, a poverty ratio of 1.0 (income at 100% of poverty level) means a person is living right at the poverty line; a ratio of 0.5 (income at 50% of poverty level) would mean that a person is living in a household making only half the income designated as the poverty threshold. The Census Bureau describes those with family incomes below one half of their poverty threshold as being “severely poor.” People with incomes at or above their threshold but below 125 percent of their threshold are classified as “near poor.”

More than one third (37%) of those living on Yavapai Apache Nation are classified as “severely poor,” with poverty ratios that ranges from below 0.5 to .99. These rates are higher than those of the State (19%) and the County (16%). A further 12 percent of tribal members are classified as “near poor” with poverty ratios between 1.00 and 1.24. These data indicate that almost half (49%) of the Yavapai Apache Nation households are living in poverty, while the remaining 51 percent are classified as not living in poverty. See Table 17 and Figure 14. ACS Table C17002 was used to create this table.

Arizona | Yavapai County | Yavapai Apache Nation
Households Receiving Supplemental Nutrition Assistance Program (SNAP)

More than one-third of households (36.8%) on the Yavapai Apache Nation receive assistance from the Supplemental Nutrition Assistance Program (SNAP). Almost one-third (29.9%) of households receiving SNAP assistance have at least one person over age 60 in the household, higher than the state (26.1%) but lower than the county (31.1%). See Table 18. ACS Table S2201 was used to create this table.

Fertility

The birth rate for women between the ages of 15 and 50 years on the Yavapai Apache Nation (10.3%) is twice that of the State (5.4%) and the County (5.0%). The proportion of unmarried women giving birth on the White Mountain Apache Tribe (5.5%) is three times the State (2.1%) and County (1.8%) rates. See Table 19 and Figure 15.

Figure 15. Births per-1000 Women

These data provide a snapshot in time for the Yavapai Apache Nation, primarily the status of the population at the time of the 2011-2015 American Community Survey estimates for the period.
APPENDIX A:
THE YAVAPAI APACHE NATION AMERICAN COMMUNITY SURVEY 2011-2015, 5-YEAR ESTIMATES MARGIN OF ERROR ESTIMATES
ACS Margin of Error Estimates
The ACS estimates are based on data from a sample of housing units and people in the population, not the full populations. For this reason, ACS estimates have a degree of uncertainty associated with them, called sampling error. In general, the larger the sample, the smaller the level of sampling error. The ACS calculates standard errors for each estimate produced and publishes the 90 percent confidence level margins of error (the Census Bureau standard). You can be 90 percent confident that the interval within the margin of error from the estimate includes the true value. Users can add and subtract the margin of error value from the estimate to find the top and bottom of the range within which the ACS is 90 percent confident that their estimate lies in.

Understanding margin of error
A term you will often come across in survey research is "within the margin of error." Most people hear the term frequently during election season when results from polls are reported. Many surveys and polls collect data from a representative sample of a population to make determinations about a larger population. Results would be somewhat different each time the survey is administered to a different representative sample. The margin of error accounts for these differences by calculating an upper and lower boundary the true result would likely fall between if every member of population was surveyed.

For example, in the case of Yavapai Apache Nation the ACS has established that there are 1,062 persons present on the Yavapai Apache Nation. The survey also indicates that there are 490 males and 574 females in the total population, with a margin of error of plus or minus (±) 145 males and (±) 160 females. See Table 2 margin of error estimates. The margin of error tells us that if the same survey were administered to the Yavapai Apache Nation tribal members again, it is highly probable that the true population for males would be between 345 and 635 males and similarly that the true population of females would be between 414 and 734.
